JUSTIN GRITTEN

Senior Full Stack Developer | Scalable Applications | Real-Time Systems | AI-Powered Solutions

+17802172214 • justin.gritten@gmail.com • linkedin.com/in/justingritten • 12833 Cliffshore Drive, Lake Country, BC, Canada

Summary

Senior Full Stack Developer and hands-on Development Manager with 10+ years of experience architecting scalable SaaS applications and leading cross-functional delivery. Known for operating at the intersection of Product, Engineering, and Business stakeholders to translate ambiguous requirements into high-quality, production-ready systems. Expert in React and TypeScript with a strong track record of modernization, real-time systems, and performance optimization.

Key Achievements

Frontend & System Modernization Leadership

Managed multiple full-system refactors, significantly improving maintainability, performance, and long-term scalability across distributed applications.

Real-Time Systems Architecture

Planned and delivered real-time communication infrastructure used across multiple production applications, enabling live updates and cross-system coordination.

Performance & Reliability Improvements

Presented high-impact performance gains through profiling, data-access optimization, and architectural redesigns that reduced system bottlenecks.

Experience

Eldor-Wal Registrations Ltd. — Edmonton, AB, Canada

Development Manager (Hands-On Full Stack Engineer) (Remote) — 2023 - 2025

- Joined the company during a critical modernization phase, leading a full React platform overhaul that reduced feature development time by ~30%.
- Provided large volumes of production React code—building complex interfaces, shared UI components, real-time views, and multistep workflows while improving overall UX consistency.
- Developed and delivered the company's first real-time Web Socket service, eliminating polling-based updates and reducing data refresh latency from minutes to near-real-time, improving responsiveness across multiple production applications.
- Refactored core front-end modules to reduce technical debt, simplify data flows, and improve load performance using better memoization patterns, API abstraction layers, and React optimization techniques.
- Partnered with Product and Design to translate high-level requirements into React-based feature plans, prototypes, and production-ready releases with iterative delivery cycles.
- Mentored developers on React architecture and performance best practices, improving code review throughput and reducing rework, while helping onboard and upskill junior engineers more quickly across the team. Ensured best practices were well documented.
- Designed and maintained secure REST APIs supporting multiple client applications, optimizing MSSQL queries and indexes to reduce slow-query response times by ~40% and improve overall API reliability under production load.

Kore Software — New York, United States

Senior Full Stack Developer (Remote) — 2022 - 2023

- Built and maintained high-performance front-end and back-end features across large-scale enterprise applications.
- Contributed to system design discussions involving microservices, serverless workloads, and high-volume data flows (EC2, Lambda, API Gateway).
- Improved performance across high-traffic endpoints by optimizing data-access layers and client-server interactions, cutting average response times by ~25–35% for critical user workflows.
- Collaborated with UX/Product teams to deliver refined, user-focused interfaces and iterative feature improvements.

Onware Inc — Edmonton, Alberta Canada

Lead Developer | Associate (On-Site) — 2020 - 2022

- Joined as a Senior .NET Developer and quickly assumed the role of Lead, directing modernization efforts across legacy systems.
- Directed multiple software modernization projects from concept through delivery, transforming legacy systems into scalable, maintainable solutions.
- Structured coherent execution plans for major product initiatives, aligning engineering efforts with roadmap goals.
- Introduced Agile practices, served as both Product Owner and Scrum Master, improving delivery velocity and clarity.
- Designed and shipped new systems using .NET, TypeScript, and modern front-end architectures, with extensive MSSQL query and stored procedure optimization.

Experience

Gemstone Logistics
Sherwood Park, Alberta Canada

Lead Full Stack Developer (On-Site)
2015 - 2020

- As an entry-level developer, I quickly assumed many key responsibilities
- During this time, I became extremely proficient in several core areas
- Lead Developer tasked with bringing a legacy desktop application to the web using HTML5, Angular 10+, Entity Framework Core 3.1, and TypeScript, including extensive MSSQL query, index, and stored procedure optimization

Education

SAIT
Calgary, Canada

Object Oriented Software Development Certificate
2015

NAIT
Edmonton, Canada

Application Development Certificate - C# Specialty
2012

Art Institute of Vancouver
Vancouver, Canada

Game Art & Design - Diploma
2004 - 2006

Skills

Database: Query optimization · Execution plan analysis · Indexing · Deadlock diagnosis · Stored procedures · Functions · Triggers

Languages & Frameworks: JavaScript · TypeScript · Node.js · React · C# · React Native · .NET · Angular · HTML · CSS · SQL · Next.js

Databases & Tools: MSSQL Server · Sequelize ORM · Entity Framework · SQL Server Management Studio · Docker · Git · DynamoDb

Cloud & Infrastructure: AWS · GitHub · GitHub Actions / Workflows · S3 · Lambda · SQS · Azure · IIS · Serverless · CI/CD Pipelines · CloudWatch

Development Tools: Visual Studio · VS Code · Visual Studio · Cursor IDE · Postman · REST APIs

Quality Assurance: Jest · Playwright · xUnit · Jasmine · Karma · Agile · Scrum

Product & Collaboration Tools: Agile · Scrum · Jira · Figma · Atlassian

Communication: Gmail · Google Chat · Slack · Discord · MS Teams · Documentation

AI & Modern Tools: AI Development Agents · MCP Integration · Claude Code · GitHub Copilot · ChatGPT

Design & Graphics: Photoshop, Illustrator

Soft Skills: Communication · Continuous Learning · Accountability · Teamwork · Troubleshoot · Time Management · Problem-solving

Actively Learning: Python · React-Native · FastAPI · PostgreSQL · GraphQL · GO · NestJS
